

Our Company

At Janssen, the pharmaceutical companies of Johnson & Johnson, our mission is to transform individual lives and change fundamentally the way diseases are managed, interpreted, and prevented.

We are actively developing treatments for our patients in **five important therapeutic areas of healthcare (Oncology, Neuroscience, Immunology, Infectious diseases & vaccines, Cardiovascular & Metabolic diseases)**.

We aim to make the most fundamental change in the way diseases are managed. We have a **leading portfolio of solutions** that can alleviate, contain or cure some of the world's most serious conditions and diseases. But we go one step further in our commitment. We are building great healthcare solutions that will **bring benefits to patients** and **add value to society and our company's stakeholders**.

We are focused on **operating in transparency** and on **building trust** by listening to the people involved in healthcare decisions. We work with today's informed and empowered patients to ensure our solutions are designed for and reach the people who need them. We work for change that will **improve access to medicines: the best available treatment at an affordable price**. That's why we at **Janssen** strive to provide access to effective and affordable medicines and related health care services across the world.

Putting all these factors together, we are looking at a future where **patients and their families** have a new sense of hope. **Hope for a cure**.
